

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): A method comprising:  
displaying a first content on a flat display surface within a spherical display;  
simultaneously displaying a second content on a physical spherical display surface within the spherical display; and  
scrolling through the second content based on instructions while displaying the first content,  
wherein the spherical display surface is imposed over the flat display surface such that the first content and the second content are distinctly and simultaneously viewed.

Claim 2 (original): The method according to claim 1 further comprising storing the first content and the second content in a storage device.

Claim 3 (original): The method according to claim 1 further comprising capturing the first content with a content capturing device.

Claim 4 (original): The method according to claim 3 wherein the content capturing device is a video camera.

Claim 5 (original): The method according to claim 3 wherein the content capturing device is a digital camera.

Claim 6 (original): The method according to claim 1 wherein the first content is one of a video stream and digital image.

Claim 7 (original): The method, according to claim 1 wherein the instructions are based on rotating a playback ring to scroll through the second content.

Claim 8 (original): The method according to claim 1 wherein the instructions are based on rotating a knob to scroll through the second content.

Claim 9 (currently amended): The method according to claim 1 wherein the second comprises content menu information.

Claim 10 (original): The method according to claim 1 wherein the spherical display surface displays the second content in a three dimensional viewpoint.

Claim 11 (currently amended): A system comprising:  
means for displaying a first content on a flat display surface within a spherical display;  
means for simultaneously displaying a second content on a physical spherical display surface within the spherical display;  
and

means for scrolling through the second content based on instructions while displaying the first content, wherein the spherical display surface is imposed over the flat display surface such that the first content and the second content are distinctly and simultaneously viewed.

Claims 12-25 (cancelled)

Claim 26 (currently amended): A device, comprising:

a physical spherical display for simultaneously displaying a video stream and menu information wherein the spherical display further comprises a flat display surface for the video stream and a spherical display surface for the menu information;

a playback ring for scrolling through the menu information;  
and

a storage module to store the video stream and the menu information.

Claim 27 (original): The device according to claim 26 wherein the spherical display shows the menu information with a three dimensional effect to distinguish from the video stream.

Claim 28 (original): The device according to claim 26 wherein the menu information is shown overlaid on top of the video stream.

Claim 29 (cancelled)

Claim 30 (new): The method according to claim 1 wherein the spherical display is semi-spherically shaped and wherein the spherical display surface substantially spans the semi-spherical shape of the spherical display and the flat display surface is coupled to the spherical display surface and spans a diameter of the spherical display surface.

Claim 31 (new): The method according to claim 3 wherein the spherical display is coupled to the content capturing device.

Claim 32 (new): The method according to claim 1 wherein the scrolling further comprises controlling at least one of a direction and speed of a playback of the first content.

Claim 33 (new): The method according to claim 1 wherein the spherical display is configured to simultaneously display multiple video feeds.

Claim 34 (new): The method according to claim 1 wherein the spherical display is configured to apply special effects to a portion of the first content, wherein the special effects comprises at least one of sepia tone, black and white tone and slow shutter effect.

Claim 35 (new): The system according to claim 11 wherein the spherical display is semi-spherically shaped and wherein the spherical display surface substantially spans the semi-spherical shape of the spherical display and the flat display surface is coupled to the spherical display surface and spans a diameter of the spherical display surface.

Claim 36 (new): The system according to claim 11 wherein the means for displaying the first content and the second content is coupled to a means for capturing the first content.

Claim 37 (new): The system according to claim 11 wherein the means for scrolling is further configured to control at least one of a direction and speed of the playback of the content.

Claim 38 (new): The system according to claim 11 wherein the spherical display is configured to simultaneously display multiple video feeds.

Claim 39 (new): The system according to claim 11 wherein means for simultaneously displaying the second content is further configured to apply special effects to a portion of the first content, wherein the special effects comprises at least one of sepia tone, black and white tone and slow shutter effect.

Claim 40 (new): The device according to claim 26 wherein the spherical display is semi-spherically shaped and wherein the spherical display surface substantially spans the semi-spherical shape of the spherical display and the flat display surface is coupled to the spherical display surface and spans a diameter of the spherical display surface.

Claim 41 (new): The device according to claim 26 wherein the spherical display is coupled to a content capturing device configured to capture the video stream.

Claim 42 (new): The device according to claim 26 wherein the playback ring is further configured to control at least one of a direction and speed of the playback of the video stream.

Claim 43 (new): The device according to claim 26 wherein the spherical display is configured to simultaneously display multiple video streams.

Claim 44 (new): The method according to claim 26 wherein the spherical display is configured to apply special effects to a portion of the video stream, wherein the special effects comprises at least one of sepia tone, black and white tone and slow shutter effect.
